

Since being established, we have evolved significantly, actively enhancing our services with the combined knowledge of the most knowledgeable businesses in the sector and our own subject matter experts.

Across our key service areas, our vision is to be a trusted partner to our clients, providing expertise, data and solutions that support the way you work.

Food Safety Solutions

Designed to save you time and help reduce food safety risks, our proprietary tools support the development and maintenance of food fraud vulnerability risk assessments as required by Global Food Safety Initiative (GFSI) benchmarked certification schemes. Receive customised regular updates to keep you up to date with relevant issues as they are reported. Check companies for commodity specific references to food safety concerns, an essential reference for monitoring supplier performance and intelligence when onboarding new suppliers.

We provide global certification and audits for all the main food safety standards, with capability to support 2nd party programs including supplier audits.

Product Certifications

Pursuing multiple certifications can be overwhelming. With proprietary tools to manage your supply chain data and documentation, plus tracking your certification status, our experienced teams make the certification process efficient. The certification we offer include: Organic, Non-GMO, Plant-based, Vegan, Gluten-Free, Non-GMO Project Verification.

Sustainability Services

We are a trusted partner to help you align with global sustainability requirements providing the following certification standards and services:

- NGMO standards (FCID's own NGMO standard; Europe Soy, VLOG)
- ProTerra (a leading sustainability standard covering human rights and good labour practices, good agricultural practices, biodiversity, deforestation, conservation values with a special focus on non-GMO)
- Profarm (supporting the agriculture industry with environmental sustainability and social responsibility)
- Bonsucro
- EU and USDA Organic
- Regenerative Agriculture (FCID Regenerative Agriculture Standard and ROC)
- RTRS (supporting the sustainable production of soy)
- Support for Lifecycle Assessments and Product Environmental Footprints and scope 3 carbon reduction programs

Testing Solutions

We can design a cost-effective testing protocol, customised to your objectives, along with reliable technical expertise and comprehensive customer support. With expertise in genomics, from PCR-based testing to metagenomics and more, our dedicated team are happy to help you navigate the complex testing landscape and fulfil market demands.

Product Development Solutions

Our digital solutions enable customers to create better, more compliant products faster. They streamline the development process – from establishing specifications and recipes to creating labels – by managing costs, compliance, nutrition and more, revolutionizing your R&D productivity.

Regulatory Compliance

With FoodChain ID's Regulatory Compliance tools you can enjoy access to timely and accurate data plus the expertise to help accelerate time to market and market expansion. Our regulatory data sources, product assessment tools, and market intelligence can also be integrated into your workflow, so they suit the needs of your business. Our regulatory solutions provide the expert-verified data that regulatory and compliance teams need right when they need it, saving you time and reducing risk.

Supplements R&D Insights

All the data you need to create compliant products worldwide.

- Regulatory ingredient status
- Health claims and Product benchmarking
- Scientific substantiation
- Summarized documentation

Enabling the development of high-quality, compliant food supplements, our data helps you stay competitive and meet growing demand for safe, effective, and innovative products.

- Save time and resources
- Facilitate informed decision making
- Simplify regulatory compliance
- Mitigate risks

Supplements Compliance

Instant, one-click access to regulatory audit and automated label generation done by AI: Check the conformity of your formulas in Europe • Update all your formulas and labels when regulations change or you enter new markets • Generate labels with available health claims, mandatory warnings, list of ingredients, nutritional table, etc.
